Just because XM offers instant traffic and weather NAB feels threatened. This is ridiculous. The weather and traffic that is offered by XM is not exactly area specific, such as what would be supplied by a local radio station. The traffic information which is given covers large areas and for the most part, is fairly general. Let the local stations worry, the only time I listen to local radio is when I have no control of the radio. There is a reason I pay to have my subscription, which is because they (XM) have/has what I want to hear, I don't have to flip channels and get aggravated because all I hear are commercials and mindless babble. Bottom line is, if these local stations (NAB) can't compete, they need to step up to the plate or get out of the game. Stop HR 4026! I would hope that members of congress could find something a little more constructive to do with their time. Personally I would love to know how many members of congress have XM Radio in their new GM Cars or Trucks or even installed as an aftermarket feature. I am willing to bet that more than a few members of congress have subscriptions to XM, simply because it is a new form of entertainment which offers more options than any local radio station groups could possibly offer. Truthfully, while traveling, you never have to change the station. This seriously, has to be one of the bigger wastes of time that Congress Members have come up with yet.
